ABSTRACT OF THE DISCLOSURE

An assembly for cooking on a campfire includes a vertical support that has an upper end and a pointed lower end. A grill support is attached to the vertical support and is selectively positionable between the upper and lower ends. The support is elongated and has a first end and a second end. A fastener selectively fastens the grill support in a fixed vertical position to the vertical support. A grill is attached to and bounded by an upwardly extending peripheral wall. The peripheral wall has an inner surface and an outer surface. The outer surface is attached to the second end of the grill support. A plate has a peripheral edge and a hinge hingedly couples the peripheral edge to the inner surface of peripheral wall. The plate is selectively positionable between a horizontal position extending over the grill and a vertical orientation extending upwardly away from the grill.
